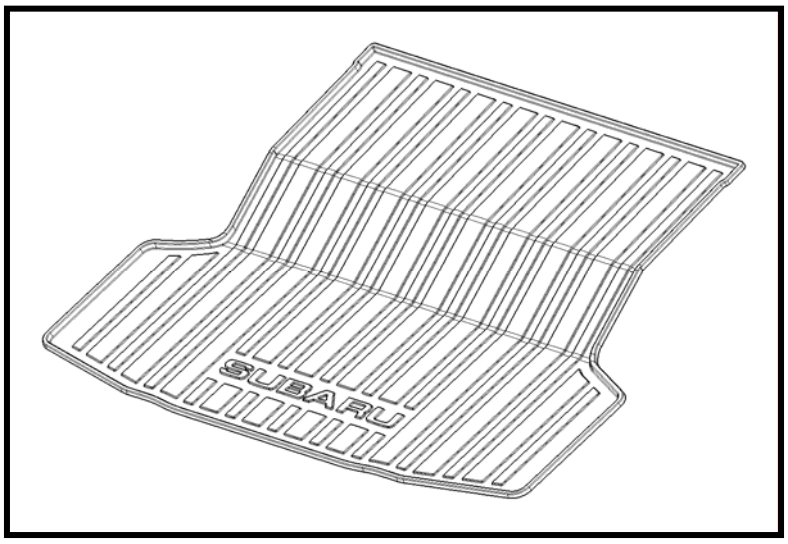
Care and Operating Instructions Impreza

J501SFG400

Your new Cargo Tray is custom molded to fit your Impreza.



Your Cargo Tray has been designed to transport normal cargo contents (i.e. jumper cables, windshield wash products, groceries, etc.). However, no dangerous or flammable materials should be carried in your vehicle at any time.

Caution should be used when transporting heavy objects in the compartments (i.e. tool kit, gravel, sand, etc.) especially when many stops and starts or cornering are anticipated during travel. These items should always be securely tied down to avoid the possibility of injuring someone.

It is **important** that your Cargo Tray is not installed if your cargo area carpet is damp or wet, as mildew may result. Dry the carpet out completely before the Cargo Tray is installed.

Your Cargo Tray is chemically resistant to most fluids used in normal vehicle maintenance. Great **caution** must be used when transporting corrosive chemicals and should a spill occur, the liner should be carefully removed from the vehicle immediately and washed thoroughly with water to prevent damage. Care must be taken to avoid physical contact with such chemicals. If contact is made, follow chemical manufacturer's instructions and cautions.

To maintain the luster and non-stick finish of your tray, clean with a cloth as required using mild soap and water. It is **important** that the bottom of the liner is dry before placing it back in the cargo area, as mildew may result.

Your Cargo Tray can easily be stored in a garage or basement area when not in use, by simply removing it from your cargo area and placing it in a storage location. Upon installation after prolonged storage you may notice that the tray does not completely lay flat. This is only temporary. To help return the tray to its original shape, place the tray on the floor of your vehicle with a weight on each corner (books work well).
